Wood screws are made in a wide variety of diameters and lengths; when using the larger sizes, pilot holes are drilled to avoid splitting the wood. Lag screws are large wood screws used to fasten heavy objects to wood. Heads are either square or hexagonal. Screws that modify force and motion are known as power screws. A screw jack converts torque (turning moment) to thrust.

The name OEM is usually used when a new version of something is made by a company that is different to the company that first made it. The new company will sell the product at a cheaper price, but this is often because it does not have as many features as the first version. For example, an OEM computer program will usually only come with the
